

TOOL SELECTION - SCT CATALOG 2022

ROADMAP

Through the all new SCT 2022 catalogue, selecting a tool for a certain application has been made easy. In contrary to the previous SCT catalogues, and to those of many of our fellow tool producers, in the new SCT catalogue, our tools are sorted per material group instead of product line.

To find the right tool for your application or material group, follow the steps below.

- 1** Determine for which material group you need a tool, by reading page 9 and selecting the needed ISO code (+number)
- 2** Select the appropriate Quickfinder on page 10 and navigate to the matching page
- 3** Select the right tool through choosing the number of teeth, application or other characteristic from the table. The suitability of a tool is displayed by the number of "*" in the middle of the page
- 4** Go to the product page of the selected tool
- 5** Choose the desired dimension / edition and accompany the tool with the cutting conditions

‘Tool selection has never been easier!’ - Team SCT Tools
